前言

Preface

本标准主要用于规范车辆电子电器零部件的环境可靠性设计和测试工作。
本标准主要包括电气负荷、机械负荷、气候负荷、化学负荷、防护等级、寿命耐久等内容。
本标准不涉及电磁兼容性、连接器性能、ELV、VOC 等要求。
本标准由中英文版本组成，若英文版本与中文版本内容各异，以中文版本内容为准。
This standard specifies requirements is mainly used to ensure the environmental reliability design and validation of vehicle electronic and electrical component.
This standard mainly includes electrical load, mechanical load, climatic load, chemical load,IP grade, life endurance test and so on.
This standard does not cover electromagnetic compatibility, connector performance, ELV, VOC and other requirements.
This standard is composed of Chinese and English versions, Should there be any inconsistencies between Chinese and English versions, the Chinese version shall prevail.

修订历史 Revision History

版本 Rev.	日期 Date	修订描述 Change Description
1.0	2018/12/30	初始发布 Initial Release
1.1	2020/11/11	更新了电性能部分, updated for electrical performance 更新了环境部分, 盐雾试验, 机械冲击试验, 机械耐久试验 Updated for salt spray test, mechanical shock test, mechanical endurance test
1.0	2022/2/28	企标编号变更为 Q/HH-TS002-2022 Standard No. change to Q/HH-TS002-2022

本标准起草部门: 电子电气部。

1 范围 Scope

本标准规定了乘用车 12V 电子电气零部件产品的环境可靠性技术要求和试验方法。

本标准适用于华人运通公司开发的全部车型。

This document provides technical requirements and test methods for environmental reliability of 12V electronic and electrical component for road vehicles.

This document applies to all models developed by Human Horizons.

3 术语和定义 Terms and definitions

3.1 缩略语 Abbreviations

本标准涉及的常用缩略语定义见表 1。Common abbreviations for this documents are defined in table 1

表 1 常用缩略语 Table 1 Common abbreviations

缩写 Abbreviation	定义 Definition
DUT	被测件 Device Under Test
FPSC	功能状态分类 Functional Performance Status Classification
PSD	功率谱密度 Power Spectrum Density
CTS	零部件技术规范 Component Technical Specification
DVP	开发验证计划 Development Validation Plan

3.2 电压和电流 Voltages and currents

本标准涉及的电压和电流符号定义见表 2。The voltage and current involved in this document are defined in table 2.

表 2 电压和电流符号定义 Table 2 Abbreviations for voltages and currents

缩写 abbreviation	定义 Definition
U_N	额定电压 Nominal voltage
U_{min}	试验期间可能出现的最低电压 Minimum voltage that may occur during a test
U_{max}	试验期间可能出现的最高电压 Maximum voltage that may occur during a test
U_B	工作电压 Operating voltage
U_{Bmin}	工作电压下限值 Lower operating voltage limit
U_{Bmax}	工作电压上限值 Upper operating voltage limit
U_A, U_T, U_S, U_R	启动电压脉冲的电压水平 Voltage level of the start voltage pulse
U_{test}	试验电压 Test voltage
U_{pp}	峰峰电压 Peak-peak voltage
U_{eff}	电压有效值 RMS value of a voltage
I_N	额定电流 Nominal current
GND	接地端 Device ground

3.3 温度 Temperatures

本标准涉及的温度符号定义见表 3。The temperature involved in this document are defined in table 3.

表 3 温度符号定义 Table 3 Abbreviations for temperature

缩写 abbreviation	定义 Definition
T_{RT}	室温 Room temperature
T_{min}	最低工作温度 Minimum operating temperature
T_{max}	最高工作温度 Maximum operating temperature
T_{test}	试验温度 Test temperature
$T_{op,min}$	最低工作温度 (对于有温度保护功能的 DUT) Minimum operating temperature for component with overload protection/low-temperature protection
$T_{op,max}$	最高工作温度 (对于有温度保护功能的 DUT) Maximum operating temperature for component with overload protection/over-temperature protection

3.4 时间 Times/durations

本标准涉及的时间符号定义表 4。The time involved in this document are defined in table 4.

表 4 时间符号定义 Table 4 Abbreviations for Time

缩写 abbreviation	定义 Definition
t_{test}	试验持续时间 Test duration
T_{oper}	使用寿命期间的工作小时数 Operating hours over service life
t_r	上升时间/Risetime
t_f	下降时间/Falltime

3.5 其它 Others

本标准涉及的其它符号定义表 5。The others involved in this document are defined in table 5.

表 5 其它符号定义 Table 5 Abbreviations for others

缩写 abbreviation	定义 Definition
R_i	电源 (包括供电线束) 的内电阻 Internal resistance of the power supply (including the power supply wiring harness)
f	频率 Frequency

华人运通保密要求 HH CONFIDENTIAL

本文档所含信息均属于华人运通和/或其关联公司的所有权益。未经华人运通书面授权, 不得将本文件的任何部分通过使用、复制或转交等方式转交给第三方。所有内容在最终技术指标确定前均可随时更改。

4 一般要求 General requirements

测试必须按照以下测试条件进行，相关的偏离项应该在测试报告中进行备注。

The test must be conducted in accordance with the following test conditions, and relevant deviations should be noted in the test report.

4.1 测试环境 Temperature specifications

除非本标准另有明确定义，所有试验温度值定义均为 DUT 周围空气温度。

除非本标准另有明确定义，DUT 环境温度和湿度应满足下述要求：

——相对湿度范围（25%~75%）RH

——室温 $T_{RT} = (23 \pm 5) ^\circ C$

——试验温度 $T_{test} = T_{RT}$

Unless otherwise specified, all temperature specifications as per the ambient air of the DUT.

Unless otherwise indicated, the standard values as below apply.

——Humidity: $H_{rel} = 25\% \sim 75\%$ relative humidity

——Room temperature: $T_{RT} = (23 \pm 5) ^\circ C$

——Test temperature: $T_{test} = T_{RT}$

4.2 标准公差 Standard tolerances

如果没有不同说明，适用表 6 中所述公差（公差均参照测量值）。

Unless otherwise indicated, the tolerances as per Table 6 apply. (The tolerances as per the required measured value.)

表 6 标准公差 Table 6 Standard tolerances

频率 Frequencies	$\pm 1\%$	电压 Voltages	$\pm 2\%$
温度 Temperatures	$\pm 2^\circ C$	电流 Currents	$\pm 2\%$
湿度 Humidity	$\pm 5\%$	振动 Vibrations	$\pm 3dB$
时间 Times/durations	$\pm 1\%$	振动（功率谱密度）PSD	$\pm 5\%$

4.3 供电电源 Power supply

除非本标准另有明确定义，电子电气零部件工作电压范围，依据其 CTS 定义。

除非本标准另有明确定义，DUT 测试电压规定如下：

——12V 系统电源的供电电压： $(13.5 \pm 0.5) V$ 。

Unless otherwise indicated, the standard values for electrical and electronic component as CTS apply.

Unless otherwise indicated, the standard values for DUT as below apply.

——Supply voltage of 12V system power supply: $(13.5 \pm 0.5) V$.

4.4 测试样件 Sample

产品设计验证（DV）测试，除非本标准另有明确定义，原则上 DUT 数量需求如下：

——电气负荷测试，至少需要验证同批次生产的 3 个 DUT。

华人运通保密要求 HH CONFIDENTIAL

本文档所含信息均属于华人运通和/或其关联公司的所有权益。未经华人运通书面授权，不得将本文件的任何部分通过使用、复制或转交等方式转交给第三方。所有内容在最终技术指标确定前均可随时更改。

All information contained in this document is the property of Human Horizons and/or its affiliates. No part of this document may be used, copied, or given to a third party without HH authorization. All contents are subject to change unless the final specification is available.

	企业标准 Enterprise Standard	
	名称 TITLE: 电子电气零部件环境可靠性规范 Electrical and Electronic Component Environmental Reliability Specification	
	文件号 DOC No.: Q/HH-TS002-2022	版本 Rev: 1.0

- 机械负荷测试，至少需验证同批次生产的 6 个 DUT（其中 M03 自由跌落仅需验证 3 个 DUT）。
- 气候负荷测试，至少需要验证同批次生产的 6 个 DUT。
- 化学负荷测试，每种化学试剂对应 1 个 DUT。
- 寿命耐久测试，至少需要验证同批次生产的 6 个 DUT。

DUT 数量的具体需求，由供需双方协商确定。

Product design verification (DV) testing, unless otherwise clearly defined in this standard, in principle the DUT quantity requirements are as follows:

- For electrical loads test, at least 3 DUT of the same type need to be test.
- For mechanical loads test, at least 6 DUT of the same type need to be test.
- For climatic loads test, at least DUT pcs of the same type need to be test.
- For chemical loads test, 1 DUT per chemical,multiple use of a DUT for several chemicals is possible in consultation with the purchaser.
- For life test, at least 6 DUT of the same type need to be test.

4.5 测试实验室 Test laboratory

产品 ENV 测试，应在华人运通公司认可的第三/三方实验室进行。

原则上实验室应通过 CNAS/ ISO 17025 认可，华人运通公司有权对认可实验室进行定期审核。

For production ENV testing shall be conducted in the second/third party laboratory approved by HUMAN HORIZONS.

In principle, the laboratory should be approved by CNAS/ ISO 17025, and HUMAN HORIZONS has the right to conduct periodic audit the laboratory.

4.6 测试需求文档 Test requirements document

以下文档必须在零部件测试规范审核前，由供应商提交：

- 系统功能描述的系统设计的描述文件
- 系统原理图，零部件安装位置图，和 ENV 相关的材料描述
- 涉及 DUT 操作顺序的描述文件
- 电路部件描述（子系统，传感器，执行器）
- 系统运行/工况模拟需设置的参数
- 与车辆其它零部件的接口
- 系统的故障处理及诊断功能
- 相关的 ENV 改善措施说明

以下文档必须在零部件测试工作正式启动前，由供应商提交：

- 详细的测试时间表和测试地点/实验室
- 和华人运通公司已批准的 ENV 测试规范若存在差异，需提供偏差/不符合项说明文档
- 被测件的详细描述，包括样品阶段、零件号、软/硬件版本等。

The following documents must be submitted by the supplier before the component test specification is audited:

- System function and system design description file

华人运通保密要求 HH CONFIDENTIAL

本文档所含信息均属于华人运通和/或其关联公司的所有权益。未经华人运通书面授权，不得将本文件的任何部分通过使用、复制或转交等方式转交给第三方。所有内容在最终技术指标确定前均可随时更改。

All information contained in this document is the property of Human Horizons and/or its affiliates. No part of this document may be used, copied, or given to a third party without HH authorization. All contents are subject to change unless the final specification is available.

	企业标准 Enterprise Standard	
	名称 TITLE: 电子电气零部件环境可靠性规范 Electrical and Electronic Component Environmental Reliability Specification	
	文件号 DOC No.: Q/HH-TS002-2022	版本 Rev: 1.0

- System schematic diagram, component mounting location diagram, and ENV related description document
- A description file involving the DUT operations
- Description of component (subsystem, sensor, actuator)
- Configuration parameters of system operation/working condition simulation
- Interface with other component of the vehicle
- System troubleshooting and diagnosis functions
- Related instructions of ENV improvement measures

The following documents must be submitted by the supplier before the component testing work is officially started:

- Detailed test schedule and test site/laboratory
- If there is any deviation in the approved ENV test specification by HUMAN HORIZONS, the deviation/nonconformity specification documents shall be provided
- Detailed description of tested component, including sample phase, part number, software/hardware version, etc.

4.7 验证计划 Validation plan

供应商提交的产品设计验证计划（DVP）应包含 ENV 要求，并需通过华人运通公司 ENV 工程师的审核。供应商应根据华人运通公司的相关产品开发验证流程和零件开发计划，制定详细的验证计划，包括但不限于下述内容：检测项目、依据标准、样件类型、样件数量、DV 时间计划等。

试验分支和顺序，原则上应满足附录 B 定义的要求，具体由供需双方协商确定，并在 DVP 里注明。

The product design validation plan (DVP) submitted by the supplier shall contain the ENV requirements and shall be approved by Subsystem Validation Engineer (SVE) of HUMAN HORIZONS. The supplier shall make a detailed validation plan according to the component development and validation process and the component development plan of HUMAN HORIZONS, including but not limited to the following contents: test items, standards, sample type, sample quantity, DV time schedule, etc.

The test leg and sequence shall meet the specifications as defined in appendix B, which can be determined by the two parties through negotiation and document in the DVP.

4.8 测试计划 Test plan

供应商提交的产品 ENV 测试计划，需通过华人运通公司 ENV 工程师的审核。

任何与本标准不同的技术要求和试验方法，均应在产品 ENV 测试计划中注明。

产品 ENV 的 DV 和 PV 测试，需严格依据华人运通公司签署发布的产品 ENV 测试计划执行。

产品 ENV 测试计划电子档文件名，按下述规则命名：

（项目代码_专业代码_产品编号_版本号）_产品名称_ENV 测试计划_提交/发布日期。

例如：（XXX_XXX_XXXX_R1.0）_VCU_ENV 测试计划_2018-05-30.doc

产品 ENV 测试计划必须至少包含以下内容：

- 样件描述资料，如系统/产品原理描述、功能描述、接口定义描述、产品结构描述等等
- 测试需求资料，如样件数量、测试项目、测试模式等等

华人运通保密要求 HH CONFIDENTIAL

本文档所含信息均属于华人运通和/或其关联公司的所有权益。未经华人运通书面授权，不得将本文件的任何部分通过使用、复制或转交等方式转交给第三方。所有内容在最终技术指标确定前均可随时更改。

All information contained in this document is the property of Human Horizons and/or its affiliates. No part of this document may be used, copied, or given to a third party without HH authorization. All contents are subject to change unless the final specification is available.

	企业标准 Enterprise Standard	
	名称 TITLE: 电子电气零部件环境可靠性规范 Electrical and Electronic Component Environmental Reliability Specification	
	文件号 DOC No.: Q/HH-TS002-2022	版本 Rev: 1.0

- 功能监控、失效模式定义及符合性判定准则
- 测试子系统构建描述、模拟负载、外部激励/触发信号等等
- 测试布置、测试线束、详细的测试要求（含测试等级）等等

The ENV test plan submitted by the supplier shall be approved by the engineer of HUMAN HORIZONS.

Any technical requirements and test methods different from this documents shall be indicated in the ENV test plan of the product.

The DV and PV tests of the ENV shall be performed strictly in accordance with the ENV test plan signed and issued by HUMAN HORIZONS.

The documents of product ENV test plan, named according to the following rules:

(project code _ department code _ product code _ version number) _ Product name _ ENV test plan _ submission/release date.

Example :(xxx_xxx_xxxx_r1.0) _VCU_ENV test plan _ 2018-05-30.doc

The product ENV test plan must contain as following:

- Sample description documents, such as system/product principle description, function description, interface definition description, product structure description, etc
- Test requirements information, such as number of samples, test projects, test model, and so on
- Functional monitoring, failure mode definition and compliance criteria
- Test subsystem configuration descriptions, simulated loads, external excitation/trigger signals, etc
- Test layout, test harness, detailed test requirements (including test grade), etc

4.9 测试报告 Test report

供应商提交的产品 ENV 测试报告，需通过华人运通公司 ENV 工程师的审核。

为了能在开发过程中进行历史追溯，所有产品测试相关的原始数据及其它验证资料，对华人运通公司都是非保密的，华人运通公司有权现场跟踪产品测试过程。

ENV 测试报告必须至少包含以下内容：

- DUT 生产厂商、样件阶段（A 样/B 样/C 样）、样件序号、软/硬件版本信息
- 测试现场的布置照片，样品试验前后状态的照片。
- 测试设备及其校准数据。如包括设备名称、型号、校准日期等等。
- 测试数据、符合性判定/结果
- 测试报告授权签字、盖章

The ENV test report submitted by the supplier shall be approved by the ENV engineer of HUMAN HORIZONS.

In order to ensure traceability during the development process, all original data and other verification data related to product testing are not confidential to HUMAN HORIZONS, and HUMAN HORIZONS has the right to audit the product testing process on site.

The ENV test report must contain at least the following:

- DUT manufacturer, sample type (A sample /B sample /C sample), sample serial number, software/hardware version information

华人运通保密要求 HH CONFIDENTIAL

本文档所含信息均属于华人运通和/或其关联公司的所有权益。未经华人运通书面授权，不得将本文件的任何部分通过使用、复制或转交等方式转交给第三方。所有内容在最终技术指标确定前均可随时更改。

All information contained in this document is the property of Human Horizons and/or its affiliates. No part of this document may be used, copied, or given to a third party without HH authorization. All contents are subject to change unless the final specification is available.

	企业标准 Enterprise Standard	
	名称 TITLE: 电子电气零部件环境可靠性规范 Electrical and Electronic Component Environmental Reliability Specification	
	文件号 DOC No.: Q/HH-TS002-2022	版本 Rev: 1.0

- Photos of the test setup, photos of sample before and after test.
- Test equipment and calibration information. Such as equipment name, model, and calibration date and so on.
- Test data, conformity determination/result
- Authorized signature and seal of test report

4.10 参数测试 Parameter test

必须在测试计划中定义一组关键参数，如试验温度、湿度、静态电流消耗、工作电流、输出电压、接触电阻、输入阻抗、信号频率（上升时间和下降时间），及数据总线信号、非电参数（马达扭矩、灯光亮度）等，在每个试验流程开始之前和结束之后，必须检查这些关键参数是否符合相关设计要求，并且需要把检查结果记录在试验报告中。

除非本标准另有明确定义，原则上每个 DUT 的分支试验开始前和结束后需进行五点参数测试，每个 DUT 的每个试验项试验开始前和结束后需进行单点参数测试。

五点参数测试主要验证 DUT 在三种工作电压和三种工作温度条件下的工作状态，仅包括下述五种组合条件： (U_B, T_{RT}) 、 (U_{Bmin}, T_{min}) 、 (U_{Bmin}, T_{max}) 、 (U_{Bmax}, T_{min}) 、 (U_{Bmax}, T_{max}) 。

单点参数测试主要验证 DUT 在一种工作电压和一种工作温度条件下的工作状态，组合条件为： (U_B, T_{RT}) 。

Must define a set of key parameters in the test specification, such as test temperature, humidity, static electricity current, working current, output voltage, contact resistance and the input impedance and signal frequency (rise time and fall time), and the data bus signal and non-electric parameters (such as motor torque and lighting levels), after each test process prior to the start and end, you have to check these key parameters conform to design requirements, and need to check the results recorded in the test report.

Unless otherwise clearly defined in this document, in principle, five-point parameter tests shall be performed at the beginning and at the end of all test legs, and single-point parameter tests shall be performed before and after each test item of each DUT.

The five-point parameter test mainly verifies the working state of DUT under three operating voltages and three operating temperatures, including only the following five combination conditions: (U_B, T_{RT}) , (U_{Bmin}, T_{min}) , (U_{Bmin}, T_{max}) , (U_{Bmax}, T_{min}) and (U_{Bmax}, T_{max}) .

The single-point parameter test mainly verifies the working state of DUT under a working voltage and a working temperature condition, and the combination condition is: (U_B, T_{RT}) .

4.11 参数连续监控 Continuous Monitoring

在整个试验期间，通过参数连续监控获取的数据，可以进行变化趋势和漂移情况检查，以识别部件的异常、老化或者功能故障。如果涉及带故障存储器的部件，必须对故障存储器实施连续监控并记下故障存储器记录。

Continuous Monitoring shall detect the functional status of the component during and after exposure to the test environment. Continuous Monitoring shall detect false actuation signals, erroneous serial data messages, fault codes, or other erroneous Input/Output (I/O) commands or states. This shall be documented in test report.

华人运通保密要求 HH CONFIDENTIAL

本文档所含信息均属于华人运通和/或其关联公司的所有权益。未经华人运通书面授权，不得将本文件的任何部分通过使用、复制或转交等方式转交给第三方。所有内容在最终技术指标确定前均可随时更改。

All information contained in this document is the property of Human Horizons and/or its affiliates. No part of this document may be used, copied, or given to a third party without HH authorization. All contents are subject to change unless the final specification is available.

	企业标准 Enterprise Standard	
	名称 TITLE: 电子电气零部件环境可靠性规范 Electrical and Electronic Component Environmental Reliability Specification	
	文件号 DOC No.: Q/HH-TS002-2022	版本 Rev: 1.0

4.12 可视化检查 Visual Inspection and Dissection

可视化检查的目的是识别由环境测试引起的任何结构故障、材料/部件降解或残余物以及接近失效的情况。目视检查和解剖是在零部件环境可靠性试验流程中规定的测试后完成，对组件外壳、内部部件和电气连接的微观层面进行目视检查。在试验之前还应进行检查，并将其作为基准用于比较。

如 DUT 有任何异常，额外的样品或额外的分析方法应得到华人运通的同意，并将额外的样品或额外的分析方法，必须在测试报告中记录过程和评估结果。

通常该方法是在相关检测项目测试之前以及测试之后执行，可视化检查内容应在产品测试规范中注明，一般检查内容至少需覆盖下述项：

- 检查零件的结构完成性，是否具有裂缝、磨损、融化、老化、焊接或紧固件松动。
- 检查零件焊接是否出现裂纹、电解电容泄漏、芯片引脚积碳等。
- 检查零件表面和内部 PCB 是否出现枝状生长的毛刺。横切应检查该电路板焊接接头的质量和焊接件的金属间隙的质量，并识别焊点相关的问题，如裂纹和空洞，可能导致组件在产品生命周期的问题。此外，还将检查线路，通孔电镀和通孔的质量。

测试计划应包括 PCB 板的图形，其横断面的标识、编号和描述。

- 检查零件在电气负荷测试后是否出现过热、积碳、焊锡融化。
- 检查零件的密封性能，测试完成后内部无明显粉尘或水。

This activity shall identify any structural faults, material/component degradations or residues, and near-to-failure conditions caused by environmental testing. The Visual Inspection and Dissection is a visual review down to the microscopic level of the component's housing, internal parts, and electrical connections at the completion of testing as specified in the Component Environmental Reliability Test Flows. Examinations are also made before testing to inspect the build quality and use as a baseline for comparison purposes.

If there is any abnormality in DUT, additional analysis shall be conducted in consultation with HUMAN HORIZONS. Additional samples or additional analysis methods should be added as necessary and the results must be recorded and evaluated in the test report.

This method is usually performed before and after testing of related test items. The visual inspection content should be indicated in the product test plan, and the general inspection content should cover at least the following items:

- check the structural completeness of the component, and see if there is any signs of degradation, cracks, melting, wear, fastener failures, etc.
- check whether component welding cracks, electrolytic capacitance leakage, and chip pin carbon, etc.
- check the surface of the component and the inner PCB for burr. Cross sectioning shall inspect the quality of the solder joints and intermetallic bonds of the parts to the circuit board, and identifies solder joint concerns such as cracks and voids that may result in issues over a lifetime of component usage. Also, this will inspect for the quality of via and through-hole plating and drilling.

The Test Plan shall include a pictorial of the PCB board with the intended cross-sections identified, numbered, and described.

华人运通保密要求 HH CONFIDENTIAL

本文档所含信息均属于华人运通和/或其关联公司的所有权益。未经华人运通书面授权，不得将本文件的任何部分通过使用、复制或转交等方式转交给第三方。所有内容在最终技术指标确定前均可随时更改。

All information contained in this document is the property of Human Horizons and/or its affiliates. No part of this document may be used, copied, or given to a third party without HH authorization. All contents are subject to change unless the final specification is available.

	企业标准 Enterprise Standard	
	名称 TITLE: 电子电气零部件环境可靠性规范 Electrical and Electronic Component Environmental Reliability Specification	
	文件号 DOC No.: Q/HH-TS002-2022	版本 Rev: 1.0

- Check the component there shall be no evidence for overheating, carbon deposition and solder melting after electrical load test.
- check the sealing performance of the component, and there shall be no evidence for dust or water inside after the test.

4.13 工作模式 Operating Types

DUT 在其使用寿命期间，一般会存在不同的工作运行方式，这些运行方式必须在试验中进行相应的模拟。供需双方应协商产品工作模式、运行参数以及必要的边界条件，并在产品测试规范中注明。

工作模式 1: DUT 未通电

- 工作模式 1.a: DUT 未连接到线束。
- 工作模式 1.b: DUT 模拟在车辆上的安装位置，连接到线束

工作模式 2: DUT 通电运行

- 工作模式 2.a: DUT 在无运行负载的情况下工作。
- 工作模式 2.b: DUT 在最小运行负载的情况下工作。
- 工作模式 2.c: DUT 在最大运行负载的情况下工作。

The electric, electronic and mechatronic component and systems are operated in different operating modes during service life, which must be simulated correspondingly during the tests. Details concerning the operating modes, operating loads (e.g., activation, bus activity, bus messages, original sensors, original actuators, or replacement circuitry), and the required boundary conditions must be agreed upon between the contractor and the purchaser and must be documented.

Operating mode I - DUT not electrically connected

- Operating mode 1.a: The DUT is not electrically connected, without plug and harness.
- Operating mode 1.b: The DUT is not electrically connected, but with connected plugs and harness.

Operating mode II - DUT electrically connected

- Operating mode 2.a: The DUT must be operated without operating load.
- Operating mode 2.b: The DUT must be operated with minimal operating load.
- Operating mode 2.c: The DUT must be operated at maximum load (power user, but no misuse).

4.14 功能状态分类 Functional Status Classification (FPSC)

用于描述了 DUT 在测试中和测试后的功能状态。

依据 DUT 在测试中和测试后的功能状态，对其分类进行定义。

- Class A: 试验中和试验后，DUT 所有功能满足设计要求。
- Class B: 试验中 DUT 所有功能满足设计要求，但是其中一项或多项超出了规定的公差。试验后所有功能自动恢复到规定限值。存储器功能应符合 Class A。
- Class C: 试验中 DUT 的一项或多项功能不满足设计要求，但是在试验后能自动恢复正常运行。
- Class D: 试验中 DUT 的一项或多项功能不满足设计要求，并且在试验后不能自动恢复正常运行，需要对 DUT 进行简单的操作重新激活才能正常运行。

华人运通保密要求 HH CONFIDENTIAL

本文档所含信息均属于华人运通和/或其关联公司的所有权益。未经华人运通书面授权，不得将本文件的任何部分通过使用、复制或转交等方式转交给第三方。所有内容在最终技术指标确定前均可随时更改。

All information contained in this document is the property of Human Horizons and/or its affiliates. No part of this document may be used, copied, or given to a third party without HH authorization. All contents are subject to change unless the final specification is available.

	企业标准 Enterprise Standard	
	名称 TITLE: 电子电气零部件环境可靠性规范 Electrical and Electronic Component Environmental Reliability Specification	
	文件号 DOC No.: Q/HH-TS002-2022	版本 Rev: 1.0

——Class E: 试验中 DUT 的一项或多项功能不满足设计要求, 并且试验后不能自动恢复正常运行, 需要对 DUT 进行修复或更换才能正常运行。

This section describes the functional status of the DUT during and after the test. The functional status of the DUT is to be specified for each test.

--Class A: All functions of the device/system perform as designed during and after the test.

--Class B: All functions of the device/system perform as designed during the test. However, one or more of them may go beyond the specified tolerance. All functions return automatically to within normal limits after the test. Memory functions shall remain class A.

--Class C: One or more functions of a device/system do not perform as designed during the test, but return automatically to normal operation after the test.

--Class D: One or more functions of a device/system do not perform as designed during the test and do not return to normal operation after the test until the device/system is reset by simple "operator/use" action.

--Class E: One or more functions of a device/system do not perform as designed during and after the test and cannot be returned to proper operation without repairing or replacing the device/system.

6 电气负荷 Electrical requirements and tests

6.1 E01 辅助起动过电压 E01 Jump start

本项测试主要模拟辅助起动的工况。

Jump starting of the vehicle is simulated. The maximum test voltage results from commercial vehicle systems and their elevated electric system voltages.

6.1.1 要求 Requirement

DUT 测试结果应满足下述要求:

——对于车辆启动过程需正常工作的零部件, FPSC 至少需满足 Class B。

——其它零部件, FPSC 至少需满足 Class C。

DUT test results should meet the following requirements:

--Components relevant to starting (e.g., starter): Functional status B

--All other components: Functional status C

6.1.2 试验 Test

E01 试验参数需满足表 11 规定的要求。

E01 test parameters should as per the requirements in table 11.

表 11 E01 辅助起动过电压 试验参数 Table 11 E01 Test parameters, jump start

工作模式 DUT operating mode	2.c
U_0	0V
U_1	3V (+ 4%, 0%)
U_2	10.8V (+ 4%, 0%)
U_3	26V (+ 4%, 0%)
t_1	1s
t_2	0.5s
t_3	5s
t_4	1s
t_5	60s
t_r	<2ms
t_f	<100ms
试验温度 Temperature	T_{RT}
循环数量 Test cycles	1

6.2 E02 长时过电压 E02 Long-term overvoltage

本项测试主要模拟因发电机电压调节失效导致的长时间过电压工况。
The component's resistance to long-term overvoltage is tested. A generator control fault during driving operation is simulated.

6.2.1 要求 Requirement

DUT 测试结果应满足下述要求：
——对于行驶过程需正常工作的零部件：FPSC 至少需满足 Class B。
——其它零部件，FPSC 至少需满足 Class C。
The evaluation of the test results depends on the use of the component. A distinction is made between:
--Components necessary for driving operation: Functional status B
--For all other components: Functional status C

6.2.2 试验 Test

E02 试验参数需满足表 12 规定的要求。
E02 test parameters should as per the requirements in table 12.

表 12 E02 长时过电压 试验参数 Table 12 E02 Test parameters, Long-term overvoltage

工作模式 DUT operating mode	2.c
U _{min}	13.5V
U _{max}	17V (+ 4%, 0%)

	文件号 DOC No.: Q/HH-TS002-2022	版本 Rev: 1.0

6.3 E03 瞬时过电压 E03 Transient overvoltage

本项测试主要模拟大功率负载关断和短时急加速工况。

Transient overvoltages may occur in the electric system due to the switching off of loads and due to short accelerator tip-ins. These overvoltages are simulated by means of this test.

6.3.1 要求 Requirement

DUT 测试结果应满足下述要求:

——对于全部零部件: FPSC 需满足 Class A。

DUT test results should meet the following requirements:

--For all components: Functional status A

6.3.2 试验 Test

E03 试验参数需满足表 13 规定的要求, 试验脉冲电压波形见图 1。

E03 test parameters should as per the requirements in table 13, and the test profile is shown in figure 1

表 13 E03 瞬时过电压 试验参数 Table 13 E03 Test parameters, Transient overvoltage

工作模式 DUT operating mode	2.c
U_{min}	16V (+ 4%, 0%)

循环次数 Number of cycles	100
t ₃	8s

图 1 试验脉冲-E03 Figure 1 Test profile- E03

6.4 E04 抛负载 E04 Load dump

本项测试主要模拟由于发电机内在特性产生的过电压工况。
Dumping of an electric load, in combination with a battery with reduced buffering ability, results in an energy-rich overvoltage pulse due to the generator characteristics. This pulse is simulated by means of this test.

6.4.1 要求 Requirement

- DUT 测试结果应满足下述要求：
- 对于涉及安全性的零部件，FPSC 至少需满足 Class B。
 - 其它的零部件，FPSC 至少需满足 Class C。
- DUT test results should meet the following requirements:
- Safety-relevant components: Functional status B
 - All other components: Functional status C

6.4.2 试验 Test

E04 试验参数需满足表 14 要求，试验脉冲电压波形见图 2。
E04 test parameters should as per the requirements in table 14, and the test profile is shown in figure 2.

	企业标准 Enterprise Standard

6.5 E05 瞬态欠电压 E05 Transient undervoltage

本项测试主要模拟大功率负载开启的工况。

Transient undervoltages in the electric system may occur due to switching on of loads. These undervoltages are simulated by means of this test.

6.5.1 要求 Requirement

DUT 测试结果应满足下述要求：

——对于全部零部件：FPSC 需满足 Class A 或满足 CTS 要求。

DUT test results should meet the following requirements:

6.6 E06 电压缓降缓升

本项测试主要模拟蓄电池慢速充放电导致的电压缓升和缓降工况。

The slow decrease and increase of the supply voltage is simulated as it occurs during the slow decharging and charging procedure of the vehicle battery.

6.6.1 要求 Requirement

DUT 测试结果应满足下述要求:

——在零部件规定的工作电压范围之内, FPSC 至少需满足 Class A。

——在零部件规定的工作电压范围之外, FPSC 至少需满足 Class C。

DUT test results should meet the following requirements:

--Within the defined operating voltage of the component: Functional status A.

--Outside of the defined operating voltage of the component: Functional status C.

6.6.2 试验 Test

E06 试验参数需满足表 17 要求, 试验脉冲电压波形见图 4。

E06 test parameters should as per the requirements in table 17, and the test profile is shown in figure 4.

表 17 E06 电压缓降缓升 试验参数

Table 17 E06 Test parameters, Slow decrease and increase of the supply voltage

起始&结束电压 Start & final voltage	U_{Bmax} (+ 4%, 0%)
电压变化速率 Voltage change speed	0.5V/分钟 0.5V/min
U_1 & U_2	U_{Bmin}
t_1 & t_2	直到故障存储器被完全读出 Holding time until event memory has been completely read out

图 4 试验脉冲-E06 Figure 4 Test profile -E06

6.7 E07 电压缓降快升 E07 Slow decrease, quick increase of the supply voltage

本项测试主要模拟电池电压缓慢下降至 0 V，然后由于外接电源突然上升的工况。

This test simulates the slow decrease of the battery voltage to 0 V and the sudden reapplication of the battery voltage, e.g., by applying a jump start source.

6.7.1 要求 6.7.1 Requirement

DUT 测试结果应满足下述要求：

- 在零部件规定的工作电压范围之内，FPSC 至少需满足 Class A。
- 在零部件规定的工作电压范围之外，FPSC 至少需满足 Class C。

DUT test results should meet the following requirements:

- Within the defined operating voltage of the component: Functional status A.
- Outside of the defined operating voltage of the component: Functional status C.

6.7.2 试验 Test

E07 试验参数需满足表 18 要求，试验脉冲电压波形见图 5。

E07 test parameters should as per the requirements in table 18, and the test profile is shown in figure 5.

表 18 E07 供电电压缓降快升 试验参数

Table 18 E07 Test parameters, Slow decrease, quick increase of the supply voltage

6.8 E08 电压骤降复位 E08 Reset behavior

本项测试主要模拟零部件的复位工况。
The reset behavior of a component in its environment is simulated and tested.

6.8.1 要求 Requirement

- DUT 测试结果应满足下述要求：
- 在零部件规定的工作电压范围之内，FPSC 至少需满足 Class A。
 - 在零部件规定的工作电压范围之外，FPSC 至少需满足 Class C。
- DUT test results should meet the following requirements:
- Within the defined operating voltage of the component: Functional status A.
 - Outside of the defined operating voltage of the component: Functional status C.

	企业标准 Enterprise Standard	
	名称 TITLE: 电子电气零部件环境可靠性规范 Electrical and Electronic Component Environmental Reliability Specification

图 6 试验脉冲-E08 Figure 6 Test profile -E08

6.9 E09 反向电压 E09 Reverse polarity

本项测试主要模拟各种反极性电压的工况。
The resistance of the DUT against reverse-polarity battery connection during jump starting is simulated.

6.9.1 要求 Requirement

DUT 测试结果应满足下述要求：
——对于全部零部件，FPSC 至少需满足 Class C。
——在反极性测试过程中，对安全性具有重要意义的功能的零部件（如电动车窗玻璃升降器、电动天窗、起动机等），和安全性相关的功能不允许被激活。
注：发电机可豁免此项测试。

DUT test results should meet the following requirements:
--For all components: Functional status C
--When reverse polarity is applied, no safety-relevant functions must be triggered, e.g., for electric window lifts, electric sunroof, starter.
Note：Generators are exempt from this test.

6.9.2 试验 Test

E09 试验参数需满足表 20 表 21 要求，试验脉冲电压波形见图 7a 7b。
E09 test parameters should as per the requirements in table 20 and table 21, and the test profile is shown in figure 7a and figure 7b.

6.11 E11 参考地偏移 E11 Ground offset

本项测试主要模拟多个不同接地点之间存在电位差的工况。

Potential differences between various ground connection locations can cause signal distortions between components at these connection locations.

- 6.11.1 要求 Requirement
- DUT 测试结果应满足下述要求：
- 对于全部零部件，FPSC 需满足 Class A。
- DUT test results should meet the following requirements:
- For all components: Functional status A.

6.11.2 试验 Test

E11 试验参数需满足表 23 要求，试验布置见图 9。

如果 DUT 具有多个接地连接端，应为每个连接点进行单独试验。

E11 test parameters should as per the requirements in table 23, and the test setup is shown in figure 9

If the DUT has several voltage and ground connections, the test must be performed individually for each connection point.

6.12 E12 引脚中断 E12 Pin interruption

本项测试主要模拟单个引脚接触不良或者持续性断路导致电路中断的工况。
The supply line interruption of individual pins is simulated.

6.12.1 要求 Requirement

DUT 测试结果应满足下述要求：

——对于全部零部件，FPSC 需满足 Class C。

DUT test results should meet the following requirements:

--For all components: Functional status C.

6.12.2 试验 Test

E12 试验参数需满足表 24 要求。

E12 test parameters should as per the requirements in table 24.

表 24 E12 引脚中断 试验参数 Table 24 E12 Test parameters, Pin interruption

工作模式 DUT operating mode	2.c
Z1	状态 1：引脚连接 Condition 1: pin connected
Z2	状态 2：引脚中断 Condition 2: pin connected
t _r & t _f	< (0.1*t ₁)

循环数量 Number of cycles	2.b, 2.c 各 3 次 3 cycles with 2.b and 3 cycles with 2.c
测试序列 1 Test case1	每个引脚拔出 t=10s, 并重新复位 (长间隔) Each pin must be removed for t = 10 s and then replaced (slow interval).
测试序列 2 Test case2	在每个引脚上施加脉冲组 (见图 10) Burst on each pin in order to simulate a loose contact (Figure 10)
脉冲组中的脉冲 t ₂ 数量 Number of pulses t ₂ in the burst	4000
a	脉冲组 Burst
t ₁	0.1ms
t ₂	1ms
t ₃	10s

图 10 试验脉冲-E12 Figure 10 Test profile -E12

6.13 E13 接插件中断 E13 Connector interruption

本项测试主要模拟接插件中断的工况。

The line interruption of connectors is simulated.

6.13.1 要求 Requirement

DUT 测试结果应满足下述要求：

——对于全部零部件，FPSC 需满足 Class C。

DUT test results should meet the following requirements:

华人运通保密要求 HH CONFIDENTIAL

--For all components: Functional status C.

6.13.2 试验 Test

E13 试验参数需满足表 25 要求。

试验程序要求：从 DUT 中拔出插头 10 s，然后重新插上连接好。如果 DUT 有多个插头，先对每个接插件单独进行试验，然后不同接插件之间再重新进行组合插拔试验。

E13 test parameters should as per the requirements in table 25.

Each connector must be removed from the DUT for 10 s and then replaced. If the DUT has several connectors, each connector must be tested individually. The test sequence must be variable. If there are several connectors, their combinations must also be tested.

表 25 E13 接插件中断 试验参数 Table 25 E13 Test parameters, Connector interruption

工作模式 DUT operating mode	2.a and 2.c
循环数量 Number of cycles	每个接插件分别在两种工作模式下各插拔一次 Each connector must be removed once in both operating modes

6.14 E14 短路保护 E14 Short circuit in signal circuit and load circuits

本项测试主要模拟所有输入端和输出端以及负载电路短路的工况。

Short circuits on all device inputs and outputs and in the load circuit are simulated.

6.14.1 要求 Requirement

DUT 测试结果应满足下述要求：

- 对于图 11 中的输入端和输出端（E 和 A）：功能状态 C
- 对于图 11 中的并联供电电压端（PWR）：功能状态 D
- 对于图 11 中的接地端（GND）：功能状态 E

DUT test results should meet the following requirements:

- For inputs and outputs (E and A): Functional status C
- For looped-through supply voltages (PWR): Functional status D
- For device ground (GND): Functional status E

6.14.2 试验 Test

E14 试验参数需满足表 26 要求。

测试使用的试验电源，应能够提供零部件可能承受的短路电流。也允许通过汽车蓄电池对电源进行缓冲（在这种情况下 U_{Bmax} 等于最高充电电压）。

E14 test parameters should as per the requirements in table 26.

The power supply unit used for the test must be able to supply the short-circuit currents to be expected by the component. If this is not possible, buffering of the power supply unit by means of a car battery is permissible (U_{Bmax} is the maximum charging voltage in this case).

6.15 E15 绝缘电阻 E15 Insulation resistance

本项测试主要目的是测量采取电隔离措施元件之间的绝缘电阻。

The insulation resistance between parts without galvanic connection is determined.

6.15.1 要求 Requirement

恒定湿热和湿热循环测试后必须验证绝缘电阻。其中恒定湿热试验后需对 DUT 通风 30 分钟后再测试绝缘电阻。湿热循环试验结束后立即测试绝缘电阻。

DUT 测试结果应满足下述要求：

——绝缘电阻至少达到 $10M\Omega$

——试验后 FPSC 应满足 Class A

This test must be performed after the tests "Damp heat, constant" and "Damp heat, cyclic."

华人运通保密要求 HH CONFIDENTIAL

本文档所含信息均属于华人运通和/或其关联公司的所有权益。未经华人运通书面授权，不得将本文件的任何部分通过使用、复制或转交等方式转交给第三方。所有内容在最终技术指标确定前均可随时更改。

	企业标准 Enterprise Standard	
	名称 TITLE: 电子电气零部件环境可靠性规范 Electrical and Electronic Component Environmental Reliability Specification	
	文件号 DOC No.: Q/HH-TS002-2022	版本 Rev: 1.0

After the "Damp heat, constant" test, the DUTs must be ventilated for 30 min before the measurement of the insulation resistance is carried out. The insulation resistance must be measured immediately after the "Damp heat, cyclic" test.

DUT test results should meet the following requirements:

--The insulation resistance must be at least 10MΩ.

--After the test, functional status A must be verified.

6.15.2 试验 Test

E15 试验参数需满足表 27 要求。

E15 test parameters should as per the requirements in table 27.

表 27 E15 绝缘电阻 试验参数 Table 27 E15 Test parameters, Insulation resistance

工作模式 DUT operating mode	1.a
试验电压 Test voltage	500VDC
测试持续时间 Test duration	60s
测试点 Test points	在以下位置施加试验电压：-不存在电连接的连接端-连接引脚和导电壳体（不存在电连接）之间-连接引脚和围绕不导电壳体的电极之间 Application of the test voltage - To terminals without a galvanic connection- Between connection pins and conductive housing without a galvanic connection- Between connection pins and an electrode around the housing if the housing is non-conductive
循环数量 Number of cycles	必须经过 1 个循环，其中上述每个试验点都必须至少试验一次 1 cycle must be performed, in which each of the points defined above must be tested at least once.

6.16 E16 静态电流 E16 Closed-circuit current

本项测试主要目的是测量零部件的静态电流。

The closed-circuit current consumption must be determined.

6.16.1 要求 Requirement

DUT 测试结果应满足下述要求：

DUT 测试时必须连接相关外围零部件和电路

——对于接蓄电池常电工作的 DUT，静态电流值≤0.1 mA（相当于 1.2 mAh）

——对于接蓄电池常电工作的 DUT，当温度高于 +40℃ 时，静态电流值≤0.2 mA。

任何与上述静态电流要求不符的 DUT 设计，应获得华人运通公司 ENV 工程师的同意。

DUT test results should meet the following requirements:

The component must be measured with the associated peripherals and circuitry.

华人运通保密要求 HH CONFIDENTIAL

测试序列 2 Test case2	
T	T_{RT}
测试序列 3 Test case3	
T	T_{max}

6.17 E17 过电流 E17 Overcurrents

本项测试主要为了验证机械开关、电子输出端和触点的耐过电流性能。

The overcurrent protection of mechanical switches, electronic outputs and contacts is tested.

6.17.1 要求 Requirement

DUT 测试结果应满足下述要求：

- 对于没有熔断器设计的零部件，FPSC 应满足 ClassA。
- 如果负载电路中存在保险设计，允许该保险熔断/激活。
- 对于具有过载识别（电流、电压、温度）功能的电子输出端，FPSC 应满足 ClassC。

DUT test results should meet the following requirements:

- Functional status A for mechanical components without fuse.
- If fuse elements are available in the load circuit, these may be triggered.
- Functional status C for electronic outputs with overload detection (current, voltage, temperature).

6.17.2 试验 Test

E17 试验参数需满足表 29 要求。

E17 test parameters should as per the requirements in table 29.

华人运通保密要求 HH CONFIDENTIAL

本文档所含信息均属于华人运通和/或其关联公司的所有权益。未经华人运通书面授权，不得将本文件的任何部分通过使用、复制或转交等方式转交给第三方。所有内容在最终技术指标确定前均可随时更改。

	文件号 DOC No.: Q/HH-TS002-2022	版本 Rev: 1.0

表 29 E17 过电流 试验参数 Table 29 E17 Test parameters, Overcurrents

工作模式 DUT operating mode	2.c
温度 Temperature	T_{max}
电子输出端试验条件 Test conditions for electronic outputs	输出端能够承受至少三倍的标准负荷, 负荷持续时间: 30 分钟 The output must withstand at least the triple value of the nominal load without damage. Load duration 30 min
开关输出端的试验条件 Test conditions for switched outputs	对于 $I_N \leq 10\text{ A}$ 的部件: $3 \times I_N$; 对于 $I_N > 10\text{ A}$ 的部件: $2 \times I_N$, 但至少为 30A, 最大为 150A, 负荷持续时间 10 分钟, 涉及多触点继电器和开关时, 每个触点单独进行试验。 For components with $I_N \leq 10\text{ A}$: $3 \times I_N$; For components with $I_N > 10\text{ A}$: $2 \times I_N$, but at least 30A and at most 150A, Load duration 10 min. Each contact must be tested individually in the case of multiple-contact relays and multiple-contact switches.

6.18 E18 短时中断 E18 Short interruptions

本项测试主要目的是模拟各种情况下短时中断的情况。

The component's behavior at short interruptions of different durations is simulated.

6.18.1 要求 Requirement

测试前需分别用 $100\Omega (\pm 5\%)$ 和 $1\Omega (\pm 5\%)$ 作为 DUT 进行测试, 用于确认验证波形是否满足要求, 将得到的结果和波形记录在报告中。

One reference measurement each with $100\Omega (\pm 5\%)$ and $1\Omega (\pm 5\%)$ as a DUT substitute must be performed and documented. Verification of the edge steepness must be provided with this test setup.

DUT 测试结果应满足下述要求:

在 $t_1 < 100\mu\text{s}$ 时, 需满足 Class A; 在 $t_1 \geq 100\mu\text{s}$ 时, 需满足 Class C

DUT 偏离出 Class A 时的 t_1 必须记录在报告中。

DUT test results should meet the following requirements:

For $t_1 < 100\mu\text{s}$: Functional status A. For $t_1 \geq 100\mu\text{s}$: Functional status C

It must be documented as of which time value t_1 the DUT leaves functional status A for the first time.

6.18.2 试验 Test

E18 试验参数需满足表 30 要求。

E18 test parameters should as per the requirements in table 30.

S2 闭合时，其线上及其他必要线上必须串联一个<100 mΩ 电阻

The closed switch S2 including the necessary lines must have a series resistance <100 mΩ.

6.19 E19 击穿强度 E19 Dielectric strength

本项测试主要目的是测量电流隔断部件之间的击穿强度，如插头插脚，继电器，绕组或者线路。感性元件或控制感性元件的零件必须测试。

This test simulates the dielectric strength between components of the DUT that are galvanically isolated from each other, e.g., connector pins, relays, windings, or lines. The test must be performed on components that contain or control inductive subcomponents.

6.19.1 要求 Requirement

恒定湿热和湿热循环测试后必须验证绝缘电阻。其中恒定湿热试验后需对 DUT 通风 30 分钟后再测试绝缘电阻。湿热循环试验结束后立即测试绝缘电阻。

DUT 测试结果应满足下述要求：

FPSC 应满足 Class C，击穿及电弧不允许产生。

This test must be performed after the tests "Damp heat, constant" and "Damp heat, cyclic."

After the "Damp heat, constant" test, the DUTs must be ventilated for 30 min before the measurement of the insulation resistance is carried out. The insulation resistance must be measured immediately after the "Damp heat, cyclic" test.

DUT test results should meet the following requirements:

Functional state C, Dielectric breakdowns and electric arcs are not permissible.

6.19.2 试验 Test

E19 试验参数需满足表 31 要求。

E19 test parameters should as per the requirements in table 31.

工作模式 DUT operating mode	2.b
试验电压 Test voltage VRMS	500 V AC, 50 Hz, sinusoidal
测试持续时间 Test duration	60s
测试点 Test points	在以下位置施加试验电压：-不存在电连接的连接端-连接引脚和导电壳体（不存在电连接）之间-连接引脚和围绕不导电壳体的电极之间 Application of the test voltage -To terminals without galvanic connection.-Between connection pins and conducting housing without galvanic connection.-Between connection pins and conducting housing without galvanic connection.
循环数量 Number of cycles	必须经过 1 个循环，其中上述每个试验点都必须至少试验一次 1 cycle must be performed, in which each of the points defined above must be tested at least once.

6.20 E20 反馈 E20 Backfeeds

本项测试主要目的是保证 DUT 没有反馈给开关节点，保证开关节点的独立性，如 kl15 等。

The independence of switched terminals must be ensured. This test verifies that the DUT is free of backfeeds to switched terminals.

6.20.1 要求 Requirement

将 DUT 按照实车情况进行连接，包括传感器及负载，并正常工作，通过切断开关开测试电压变动波形。如存在其他可能的电压源，如 kl30，在试验期间不允许切断（参照实车实际情况）。测试需采用一台输入电阻 $\geq 10\text{ M}\Omega$ 的设备，如示波器

The DUT must be connected according to the circuitry in the vehicle (including sensors, actuators, etc.) and operated in normal operation. Switches S1 and S2 are closed. The voltage curve at the terminal being tested must be measured during switch-off of the terminal. To do this, the switches must be opened as per Table 32. The terminal must be switched off, e.g., by means of a relay or a switch (Rswitch_open $\rightarrow \infty$). Other possible voltage sources, such as t.30, must not be disconnected or switched off during the test (according to the behavior in the vehicle). The voltage curve at the terminal being tested must be measured using a measuring device (V) with an input resistance of $\geq 10\text{ M}\Omega$ (e.g., oscilloscope).

开关关断后，反馈电压必须在 20ms 内达到 1V 以下。电压波形必须为连续下降，不允许由于正脉冲存在不连续的下降。

Voltage backfeeds to the terminal being tested are permissible only up to a maximum level of 1 V. This voltage range must be achieved within $t = 20\text{ ms}$ from the time of the switch-off.

7 机械负荷 Mechanical loads

7.1 M01 机械振动 M01 Vibration test

本项试验依据标准 ISO16750-3 或 GB/T 28046.3 执行，主要模拟车辆运行过程中承受的机械振动。对于全部振动试验，DUT 应安装于三个不同的空间方向分别进行测试。对安装位置和方向的敏感的 DUT，测试需覆盖实车设计的安装空间方向。DUT 应使用和实际装车相同的线束和连接插头，对于集成了线束的样件，除非特别说明，在固定后线束应该有额外的 150mm 自由活动长度。

正弦振动的扫频速率要求：对数方式，1oct/min。

全部振动试验过程中的温度变化应满足表 34 要求，温度变化曲线图示见图 15 所示。

The test is carried out as per ISO16750-3 or GB/T 28046.3, these tests simulate the vibrational load of the component during driving operation.

For all vibration tests, DUT should be installed in three different spatial directions for testing. For DUT sensitive to mounting position and direction, the test should cover the mounting space direction of the actual vehicle design. The DUT shall use the same wire harness and connection plug as the actual loading vehicle. For the sample parts with the wire harness integrated, the wire harness shall have an additional 150mm free running length after fixation unless otherwise specified.

Frequency sweep rate requirements for sinusoidal vibrations: logarithmic mode, 1 Oct/min.

All temperature changes during the vibration test should meet the requirements in table 34, and the diagram of the temperature change curve is shown in figure 15.

表 34 振动时间与温度对应关系 Table 34 Temperature curve for vibration

时间 Time(min)	温度 Temperature °C
0	$T_{RT}=20$
60	T_{min}
150	T_{min}
210	$T_{RT}=20$
300	T_{max}
410	T_{max}
480	$T_{RT}=20$

	文件号 DOC No.: Q/HH-TS002-2022	版本 Rev: 1.0

M01-1 发动机位置 M01-1 for engine-mounted parts

7.1.1 M01-1 适用于固定在发动机装置上的零部件。

发动机振动主要分由气缸质量不平衡作用于连杆产生的正弦振动和由发动机其它振动产生的随机振动。

M01-1 is used for component fixed to the engine.

The vibration of the engine is mainly divided into sinusoidal vibration caused by the unbalance mass force in the cylinders and random vibration caused by other vibration schemes of the engine.

7.1.1.1 要求 Requirements

DUT 测试结果应满足下述要求:

——对于全部零部件, FPSC 需满足 Class A。

DUT test results should meet the following requirements:

-- For all DUT, FPSC needs to satisfy Class A.

7.1.1.2 试验 Test

对于正弦振动, 试验参数应满足表 36 要求, 试验曲线见图 16 所示。

——若 DUT 安装在不超过 5 缸 (含 5 缸) 的发动机上, 适用表 36 定义的曲线 1。

——若 DUT 安装在 6 缸以上 (含 6 缸) 的发动机上, 适用表 36 定义的曲线 2。

——若 DUT 可能安装在上述两种发动机上, 适用表 36 定义的曲线 1+曲线 2。

对于随机振动, 试验参数应满足表 37 要求, 试验曲线见图 17 所示。

For sinusoidal vibration, the test parameters should meet the requirements of table 36, and the test profile is shown in figure 16. For random vibrations, as per table 37 and figure 17, the R.M.S. acceleration value shall be 181 m/s².

-- Use curve 1 in Table 36 for DUT intended for mounting on engines with five cylinders or less.

-- Use curve 2 in Table 36 for DUT intended for mounting on engines more than five cylinders or more.

-- Both curves maybe combined to cover all engine types on one test.

7.1.2 M01-2 变速器位置 M01-2 for gearbox-mounted parts

M01-2 适用于固定在变速器装置上的零部件。

变速器振动主要分为由质量不平衡产生的正弦振动和由齿轮摩擦产生的随机振动。

M01-2 is used for component fixed to the gearbox. The vibration of gearbox is mainly classified as sinusoidal vibration caused by mass imbalance and random vibration caused by gear friction.

7.1.2.1 要求 Requirement

DUT 测试结果应满足下述要求：

——对于全部零部件，FPSC 需满足 Class A。

DUT test results should meet the following requirements:

-- For all DUT, FPSC needs to satisfy Class A.

7.1.2.2 试验 Test

对于正弦振动，试验参数应满足表 38 要求，试验曲线见图 18 所示。

对于随机振动，试验参数应满足表 39 要求，试验曲线见图 19 所示。

For sinusoidal vibration, the test parameters should as per the requirements of table 38, and the test profile is shown in figure 14.

For random vibration, the test parameters should as per the requirements in table 39, and the test profile is shown in figure 15.

7.1.3 M01-3 柔性气室位置 M01-3 for flexible plenum chamber-mounted parts

M01-3 适用于非刚性安装固定在柔性气室装置上的零部件。

柔性气室振动主要是由入口气体颤动引起的正弦振动。

M01-3 is used for component fixed to the flexible plenum chamber. The vibration of flexible plenum chamber is mainly caused by the vibration of inlet gas.

7.1.3.1 要求 Requirements

DUT 测试结果应满足下述要求：

——对于全部零部件，FPSC 需满足 Class A。

DUT test results should meet the following requirements:

-- For all DUT, FPSC needs to satisfy Class A.

工作模式 DUT operating mode	2.a or 2.c
峰值加速度 Peak acceleration	供需双方协商定义 to be agreed between customer and supplier.
冲击持续时间 Shock duration	1ms
冲击形式 Shock form	半正弦 Half-sine
每个方向上的冲击数量 ($\pm X$, $\pm Y$, $\pm Z$) Number of shocks per direction ($\pm X$, $\pm Y$, $\pm Z$)	供需双方协商定义 to be agreed between customer and supplier.

7.3 M03 自由跌落 M03 Free fall

模拟 DUT 自由坠落到地面上的情况。

This test simulates the free fall of a component to the floor.

7.3.1 要求 Requirement

DUT 测试结果应满足下述要求：

- 对于全部零部件，FPSC 需满足 Class C。
- 必须通过肉眼查看的方式对 DUT 进行检查，并通过摇晃检查是否存在松动或者发出异响。
- 如果 DUT 出现外部损坏，应将损坏情况记录在试验报告中。

DUT test results should meet the following requirements:

- For all DUT, FPSC needs to satisfy Class C.
- the DUT must be evaluated visually with the naked eye and tested for loose or rattling parts by means of shaking.
- If DUT has external damage, the damage should be recorded in the test report.

7.3.2 试验 Test

本项试验依据标准 ISO16750-3 或 GB/T 28046.3 执行，试验参数应满足表 47 要求。

The test is carried out as per ISO 16750-3 or GB/T 28046.3 with the following parameters as Table 47.

DUT 跌落撞击面 Impact surface	混凝土地面 Concrete floor
循环数量 Test cycle	3 个 DUT 依次在每轴的两个方向跌落一次。For each of the DUT one drop in both directions of a spatial axis (DUT: 1st±X, 2nd: ±Y, 3rd: ±Z)

7.4 M04 砂石轰击 M04 Stone impact test

模拟安装在暴露位置的零部件，受到碎石击打的情况。

This test Simulate the parts installed in the exposed position, which are subjected to stone impact.

7.4.1 要求 Requirement

DUT 测试结果应满足下述要求：

——对于全部零部件，FPSC 需满足 Class C。

——必须通过肉眼查看的方式对 DUT 进行检查，并通过摇晃检查是否存在松动或者发出异响。

DUT test results should meet the following requirements:

-- For all DUT, FPSC needs to satisfy Class C.

--the DUT must be evaluated visually with the naked eye and tested for loose or rattling parts by means of shaking.

7.4.2 试验 Test

根据标准 ISO 20567-1 中的试验方法 B 测试，试验参数应满足表 48 要求。

The test is carried out as per ISO 20567-1, test method B, with the following parameters as Table 48.

表 48 M04 砂石轰击试验参数 Table 48 M04 Test parameters for Stone impact test

工作模式 DUT operating mode	1.b
喷射材料质量 Quantity of blasting medium	500g
试验压力 Test pressure	2 bar
喷射材料 Blasting material	冷硬铸铁颗粒，符合标准 ISO 11124-2，粒度 4mm 至 5mm Hard-cast granular material as per ISO 11124-2, grain size 4 to 5 mm
砂石冲击面 Test surface on DUT	所有可自由接近的面 All surfaces that are freely accessible on the vehicle
冲击角度 Impact angle	与喷砂方向呈 54° 夹角 54° to blasting direction
试验装置 Test equipment	多用途碎石冲击试验装置，符合标准 ISO 20567-1 Multi-stone impact test device as per ISO 20567-1

8 气候负荷 Climatic loads

8.1 C01 高低温储存 C01 High-/low-temperature storage

模拟存储储存和运输过程中部件承受的温度负荷。

This test is Simulates the temperature load on the component during storage and transportation.

8.1.1 要求 Requirement

DUT 测试结果应满足下述要求:

——对于全部零部件, FPSC 需满足 Class C。

DUT test results should meet the following requirements:

-- For all DUT, FPSC needs to satisfy Class C.

8.1.2 试验 Test

根据标准 ISO 16750-4 或 GB/T 28046.4 中的试验方法测试, C01 试验参数应满足表 49 要求。

C01 高低温储存测试结束后, 需进行五点参数测试。

The test is carried out as per ISO 16750-4 or GB/T 28046.4, with the following parameters as Table 49, after this test, five-point parameter test shall be conducted.

表 49 C01 高低温存储 试验参数 Table 49 C01 Test parameters for High-/low-temperature storage

工作模式 DUT operating mode	1.a
试验持续时间和试验温度 Test duration and test temperature	2 个循环, 每个循环时间 24 小时 (各包含 12 小时的 T_{min} 温度储存和 12 小时的 T_{max} 温度储存) 2 cycles for 24 h each (consisting of 12 h storage at T_{min} and 12 h storage at T_{max} each)

8.2 C02 温度梯度 C02 Temperature steps

模拟部件在不同环境温度下的运行状态。

This test simulates the working state of the component at different ambient temperatures.

8.2.1 要求 Requirement

DUT 测试结果应满足下述要求:

——对于全部零部件, FPSC 需满足 Class A。

DUT test results should meet the following requirements:

-- For all DUT, FPSC needs to satisfy Class A.

8.2.2 试验 Test

根据标准 ISO 16750-4 或 GB/T 28046.4 中的试验方法测试, C02 试验参数应满足表 50 要求。

The test is carried out as per ISO 16750-4, with the following parameters as Table 50.

表 50 C02 低温运行 试验参数 Table 50 C02 Test parameters for Temperature steps

工作模式 DUT operating mode	参考测试期间 2.c，其他情况下 2.a During the parameter test (functional test) operating mode 2.c, otherwise operating mode 2.a
试验温度 Test temperature	按照图 24 所示温度变化曲线向 DUT 施加温度负荷。 每个等级的温度变化为 5℃。 A temperature profile as per Figure 24 must be applied to the DUTs. The temperature change per increment is 5 °C.
试验流程 Test sequence	DUT 在每个温度等级保持到完全恒温化，然后再进行参数测试（功能测试） The DUT must be held at every temperature increment until it completely maintains the temperature, Then a parameter test (functional test) must be performed.

图 24 C04 试验温度变化曲线-温度梯度 Figure 24 C04 Temperature profile for Temperature steps

8.3 C03 低温运行 C03 Low-temperature operation

模拟拟部件在低温条件下承受的负荷。

This test simulates the temperature load of the component under low temperature.

8.3.1 要求 Requirement

DUT 测试结果应满足下述要求：

——对于全部零部件，FPSC 需满足 Class A。

DUT test results should meet the following requirements:

华人运通保密要求 HH CONFIDENTIAL

	文件号 DOC No.: Q/HH-TS002-2022	版本 Rev: 1.0

-- For all DUT, FPSC needs to satisfy Class A.

8.3.2 试验 Test

试验依据标准 IEC 60068-2-1 或 GB/T 2423.1 执行, C03 试验参数应满足表 51 要求。

The test is carried out as per IEC 60068-2-1 or GB/T 2423.1, with the following parameters as Table 51.

表 51 C03 低温运行 试验参数 Table 51 C03 Test parameters for Low-temperature operation

工作模式 DUT operating mode	12 小时 2.a→12 小时 2.c (U_{Bmin}) →12 小时 2.a→12 小时 2.c (U_B) 12 h II.a→12 h II.c (U_{Bmin}) →12 h II.a→12 h II.c (U_B)
持续时间 Test duration	48 h
试验温度 Test temperature	T_{min}

8.4 C04 补漆温度 C04 Repainting temperature

模拟补漆作业过程中部件承受的负荷。

This test simulates the temperature load of the component during repainting.

8.4.1 要求 Requirement

DUT 测试结果应满足下述要求:

——对于全部零部件, FPSC 需满足 Class A。

DUT test results should meet the following requirements:

-- For all DUT, FPSC needs to satisfy Class A.

8.4.2 试验 Test

根据标准 ISO 16750-4 或 GB/T 28046.4 中的方法执行, C04 试验参数应满足表 52 要求。

The test is carried out as per ISO 16750-4 or GB/T 28046.4, with the following parameters as Table 52.

表 52 C04 补漆温度 试验参数 Table 52 C04 Test parameters for Repainting temperature

工作模式 DUT operating mode	2.a
试验持续时间和试验温度 Test duration and test temperature	130°C条件下 15 分钟, 110°C条件下 1 小时 15 min at 130°C, 1 h at 110°C

8.5 C05 温度冲击 (带壳体) C05 Temperature shock (with housing)

模拟汽车运行过程中冲击式温度交变对部件施加的温度负荷。

This test simulates the thermal load of a component imposed through shock-type temperature changes during vehicle operation.

8.5.1 要求 Requirement

DUT 测试结果应满足下述要求:

——对于全部零部件, FPSC 需满足 Class C。

——涉及介质-介质试验时, 液体不得浸入。

DUT test results should meet the following requirements:

华人运通保密要求 HH CONFIDENTIAL

本文档所含信息均属于华人运通和/或其关联公司的所有权益。未经华人运通书面授权, 不得将本文件的任何部分通过使用、复制或转交等方式转交给第三方。所有内容在最终技术指标确定前均可随时更改。

	文件号 DOC No.: Q/HH-TS002-2022	版本 Rev: 1.0

-- For all DUT, FPSC needs to satisfy Class C.

-- If the test medium is fluid, the fluid shall not be immersed after the test.

8.5.2 试验 Test

试验依据标准 IEC 60068-2-14 或 GB/T 2423.22 执行, C05 试验参数应满足表 53 要求。

The test is carried out as per IEC 60068-2-14 or GB/T 2423.22, with the following parameters as Table 53.

表 53 C05 温度冲击 (带壳体) 试验参数

Table 53 C05 Test parameters for Temperature shock (with housing)

工作模式 DUT operating mode	1.b
最低温度 Lower temperature	T _{min}
最高温度 Upper temperature	T _{max}
温度停留时间 Dwell time	完全恒温化之后 15 分钟 15 min after the component has achieved the temperature condition
转换时间 (空气-空气, 介质-介质) Transfer duration (air - air, medium -medium)	< 30 秒 < 30 s
用于试验 Nc 的试验液体 Test fluid for test Nc	部件在汽车中运行所处的液体 Fluid in which the component is operated in the vehicle
试验 Test	对于不总是在液体中工作的 DUT, 根据 IEC 60068-2-14 Na 进行试验。对于总是在液体中工作的 DUT (IPX8), 根据 IEC 60068-2-14 Nc 进行试验 (试验中要将 DUT 浸入, 使得 DUT 所有侧面至少被 25 mm 的试验液体围绕)。 As per DIN EN 60068-2-14 NA for components that are not permanently operated in a fluid. As per DIN EN 60068-2-14 Nc for components that are permanently operated in a liquid (IP X8). The DUT must be immersed so that all sides of the DUT are covered by at least 25 mm of the test fluid.
循环数量 Test cycles	100 *
注*如有其他要求, 依据 CTS。 Notes: If there are others requirements, as per CTS.	

8.6 C06 温度冲击 (无壳体) C06 Temperature shock (without housing)

模拟部件在无壳体情况下, 通过急剧变化温度后的可靠性。

本试验仅适用于不带壳体的零件组件。

This test simulates the reliability of a component without housing subjected to a rapid change in temperature.

This test is to be applicable to component without housing and mechanical parts.

8.6.1 要求 Requirement

DUT 测试结果应满足下述要求:

华人运通保密要求 HH CONFIDENTIAL

本文档所含信息均属于华人运通和/或其关联公司的所有权益。未经华人运通书面授权, 不得将本文件的任何部分通过使用、复制或转交等方式转交给第三方。所有内容最终技术指标确定前均可随时更改。

	名称 TITLE: 电子电气零部件环境可靠性规范 Electrical and Electronic Component Environmental Reliability Specification	
	文件号 DOC No.: Q/HH-TS002-2022	版本 Rev: 1.0

——对于全部零部件，FPSC 需满足 Class C。

DUT test results should meet the following requirements:

-- For all DUT, FPSC needs to satisfy Class C.

8.6.2 试验 Test

试验依据标准 IEC 60068-2-14 或 GB/T 2423.22 执行，C06 试验参数应满足表 54 要求。

The test is carried out as per IEC 60068-2-14 or GB/T 2423.22, with the following parameters as Table 54.

表 54 C06 温度冲击（无壳体） 试验参数

Table 54 C06 Test parameters for Temperature shock (without housing)

工作模式 DUT operating mode	1.a
最低温度 Lower temperature	T _{min}
最高温度 Upper temperature	T _{max}
停留时间 Dwell time	恒温化之后 15 分钟 15 min after the component has achieved the temperature condition
转移时间 Transfer duration	≤10 s
循环数量 Test cycles	300 *
注*如有其他要求，依据 CTS。Notes: If there are others requirements, as per CTS.	

8.7 C07 盐雾试验（外部） C07 Salt spray test with operation, exterior

模拟含盐空气和含盐水对于部件施加的负荷。

This test simulates the load of the component imposed by air and water containing salt.

8.7.1 要求 Requirement

DUT 测试结果应满足下述要求：

——对于全部零部件，FPSC 需满足 Class A。

——产品标志、标签等应清晰可见。

DUT test results should meet the following requirements:

-- For all DUT, FPSC needs to satisfy Class A.

-- Product identification and labels shall be clearly visible.

8.7.2 试验 Test

试验依据标准 IEC 60068-2-11 或 GB/T 2423.17 执行，C07 试验参数应满足表 55 要求。

The test is carried out as per IEC 60068-2-11 or GB/T 2423.17, with the following parameters as Table 55.

表 55 C07 盐雾试验（外部） 试验参数

This test simulates the load of the component through damp heat.

8.9.1 要求 Requirement

DUT 测试结果应满足下述要求:

——对于全部零部件, FPSC 需满足 Class A。

——每 7 天进行一次参数测试。

DUT test results should meet the following requirements:

-- For all DUT, FPSC needs to satisfy Class A.

--a parameter test must be carried out every 7 days.

8.9.2 试验 Test

试验依据标准 IEC 60068-2-78 或 GB/T 2423.3 执行, C09 试验参数应满足表 57 要求。

The test is carried out as per IEC 60068-2-78 or GB/T 2423.3, with the following parameters as Table 57.

表 57 C09 恒定湿热 试验参数 Table 57 C09 Test parameters for Damp heat, constant

工作模式 DUT operating mode	2.a
试验温度 Test temperature	40°C
空气湿度 Humidity	93% RH
试验持续时间 Test duration	21 Days

8.10 C10 湿热循环 C10 Damp heat, cyclic

模拟汽车行驶过程中高空气湿度条件下循环性温度变化对部件施加的热负荷。

This test simulates the thermal load of the component imposed through cyclic temperature changes at high humidities during vehicle operation.

8.10.1 要求 Requirement

DUT 测试结果应满足下述要求:

——对于全部零部件, FPSC 需满足 Class A。

——在最高试验温度和最低试验温度阶段, 各进行一次参数测试。

DUT test results should meet the following requirements:

-- For all DUT, FPSC needs to satisfy Class A.

--a parameter test must be carried out after the test temperature have been reached.

8.10.2 试验 Test

试验依据标准 IEC 60068-2-30 或 GB/T 2423.4 执行, C10 试验参数应满足表 58 要求。

The test is carried out as per IEC 60068-2-30 or GB/T 2423.4, with the following parameters as Table 58.

图 28 湿热循环（结霜）试验 Figure 28 Test profile for Damp heat, cyclic (with frost)

8.12 C12 有害气体腐蚀 C12 Harmful gas test

模拟有害气体对于部件（主要是对于部件插头触点和开关）的抗腐蚀性。

This test simulates the influence of harmful gases onto the component, particularly onto its plug contacts and switches.

8.12.1 要求 Requirement

DUT 测试结果应满足下述要求：

- 对于全部零部件，FPSC 需满足 Class C。
- 试验前后需测量开关触点和内部触点（如有）的接触电阻，测量值必须位于规定范围内。

DUT test results should meet the following requirements:

- For all DUT, FPSC needs to satisfy Class C.
- the contact resistances of switches and contacts must be measured. The measured values must meet the specifications.

8.12.2 试验 Test

试验依据标准 IEC 60068-2-60 或 GB/T 2423.51 执行，C12 试验参数应满足表 60 要求。

The test is carried out as per IEC 60068-2-60 or GB/T 2423.51, with the following parameters as Table 60.

空气湿度 Humidity	75%RH	
有害气体浓度 Harmful gas concentration	SO ₂	0.2ppm
	H ₂ S	0.01ppm
	NO ₂	0.2ppm
	Cl ₂	0.01ppm
试验持续时间 Test duration	21days	

8.13 C13 阳光辐射 C13 Solar radiation

模拟阳光照射和紫外线对于部件的影响，主要针对材料的抗晒特性。

This test simulates the influence of sun radiation and UV light onto the component. It is mainly aimed at the resistance to sunlight of the material.

8.13.1 要求 Requirement

DUT 测试结果应满足下述要求：

——对于全部零部件，FPSC 需满足 Class C。

——试验后需通过肉眼查看的方式对 DUT 进行检查，若有改变/损坏情况，须记录在试验报告中并与委托方一起进行评估。

DUT test results should meet the following requirements:

-- For all DUT, FPSC needs to satisfy Class C.

--the DUT must be evaluated visually with the naked eye.Changes or damage must be documented in the test report and evaluated with customer.

8.13.2 试验 Test

试验依据标准 DIN 75220 执行，C13 试验参数应满足表 61 要求。

The test is carried out as per DIN 75220, with the following parameters as Table 61.

表 61 C13 阳光辐射 试验参数 Table 61 C13 Test parameters for Solar radiation

工作模式 DUT operating mode	1.a
试验模式 Test profile	根据部件的安装空间应用 DIN 75220 所规定试验模式。 The test profiles as per DIN 75220 must be used depending on the installation location of the component.
安装在外部空间的部件 Components in the exterior	应用 DIN 75220 表 2 和表 5 所述试验模式 Z-Out Use of the Z-OUT profile as per Table 2 and Table 5 of DIN 75220
安装在内部空间的部件	应用 DIN 75220 所述试验模式 Z-IN1

9 化学负荷 Chemical loads

9.1 H01 化学试验 H01 Chemical tests

该试验模拟部件对不同化学试剂的抗腐蚀性。

试验开始前和结束后，DUT 功能必须完全正常并且所有参数都位于规定范围内。

试验后 DUT 标签应保持清晰可见，表面无明显变化。

This test simulates the load of the component when subjected to different chemicals. Before and after the test, DUT function must be completely normal and all parameters must be within the specified range, the DUT label should be clearly visible with no obvious changes on the surface.

9.1.1 要求 Requirement

DUT 测试结果应满足下述要求：

——对于全部零部件，FPSC 需满足 Class C。

——试验后 DUT 标签应清晰可见，无明显变化。

DUT test results should meet the following requirements:

-- For all DUT, FPSC needs to satisfy Class C.

-- The DUT label should be clearly visible without obvious changes.

9.1.2 试验 Test

试验依据标准 ISO 16750-5 或 GB/T 28046.5 执行，H01 试验参数应满足表 69 要求。

The test is carried out as per ISO 16750-5 or GB/T28046.5, with the following parameters as Table 69.

表 69 化学试验 试验参数 Table 69 Test parameters for Chemical tests

工作模式 DUT operating mode	1.a
调整 Conditioning	如果没有不同规定, DUT 和化学品要在标准气候条件下放置 Unless otherwise specified, the DUTs and the chemicals must be aged in standard climate.
试验 Test	试验根据 ISO 16750-5 第 5 部分进行: 1、化学品必须在 T_{RT} 条件下涂敷到 DUT 上。如果 CTS 没有不同规定, 必须为每种化学品选择一个适合的应用方式(应用方式表 71)。所选择应用方式要在试验报告中记录。必须确保 DUT 被化学品充分覆盖。 2. 然后必须在表 70 所述温度按照规定的作持续用时间放置 DUT。 The test is performed on the basis of ISO 16750, part 5: 1、The chemical must be applied to the DUT at T_{RT} . Unless otherwise defined in the CTS, an appropriate type of application must be selected for each chemical as per Table 71. The selected type of application must be documented in the test report. It must be ensured that the DUT is sufficiently covered with the chemical. 2. The DUT must then be aged at the temperature indicated in Table 70 for the specified exposure time.
化学试剂 Chemical type	典型化学品要求见表 70。As per Table 70.
DUT 数量 DUT number	每种化学试剂一个 DUT。1 DUT per chemical.

10.1.1 要求 Requirement

DUT 测试结果应满足下述要求:

——对于全部零部件, FPSC 需满足 Class A。

当部件功能在试验期间不能进行充分的监控时, 需要在试验持续时间达到 25%、50%和 75%时, 实施中间测量或根据试验流程图进行参数测试。

需要评估连续参数监控数据的漂移性、变化趋势、突出性或者异常性。

DUT test results should meet the following requirements:

-- For all DUT, FPSC needs to satisfy Class A.

When the functional parameters of components cannot be continuously monitored during the test, it is necessary to carry out intermediate measurement and do parameter test according to the test sequence when the test duration reaches 25%, 50% and 75%.

The data of the continuous parameter monitoring must be examined with respect to drifts, trends and irregularities.

10.1.2 试验 Test

L01 试验参数应满足表 72 要求。

Test details must be defined in the CTS as per the functioning/actuation cycle, and test parameters shall meet the requirements of table 72.

表 72 机械/液压耐久 试验参数 Table 72 Test parameters for mechanical/hydraulic endurance test

工作模式 DUT operating mode	2.c,根据功能循环/操作循环 2.c as per functioning/actuation cycle
温度 Test temperature	执行周期必须在温度谱中所示的温度下进行, 时间根据其百分比 The functioning/actuation cycles must be performed at the temperatures indicated in the temperature spectrum, the duration depending on its percentage.
循环数量 Test cycles	按照 CTS 规定 As specified in CTS

10.2 L02 高温耐久性 L02 high-temperature endurance test

该试验模拟汽车使用寿命期间部件所承受热负荷。

This test simulates in compact form the thermal load of the component during vehicle service life.

10.2.1 要求 Requirement

DUT 测试结果应满足下述要求:

——对于全部零部件, FPSC 需满足 Class A。

当部件功能在试验期间不能进行充分的监控时, 需要在试验持续时间达到 25%、50%和 75%时, 实施中间测量或根据试验流程图进行参数测试。

需要评估连续参数监控数据的漂移性、变化趋势、突出性或者异常性。

DUT test results should meet the following requirements:

The data of the continuous parameter monitoring must be examined with respect to drifts, trends and irregularities.

10.2.2 试验 Test

试验依据标准 IEC 60068-2-2 或 GB/T 2423.2 执行, L02 试验参数应满足表 73 要求。

The test is carried out as per IEC 60068-2-2 or GB/T2423.2, with the following parameters as Table 73.

表 73 高温耐久 试验参数 Table 73 Test parameters for high-temperature endurance test

工作模式 DUT operating mode	间歇性, 47 小时 2.c 和 1 小时 2.a Intermitting, 47 h 2.c and 1 h 2.a
试验持续时间 Test duration	阿伦尼乌斯模型 (见附录 A.2), 应在 CTS 中明确定义试验时间。 Arrhenius model (as per appendix A.2), Test duration should be defined in CTS.
试验温度 Test temperature	T_{max}

10.3 L03 温度交变耐久性 L03 temperature cycle endurance test

该试验模拟汽车使用寿命期间温度交变对于部件施加的热机械负荷。

This test simulates in compact form the thermal load of the component during temperature changes that occur during vehicle service life.

10.3.1 要求 Requirement

DUT 测试结果应满足下述要求:

——对于全部零部件, FPSC 需满足 Class A。

当部件功能在试验期间不能进行充分的监控时, 需要在试验持续时间达到 25%、50%和 75%时, 实施中间测量或根据试验流程图进行参数测试。

需要评估连续参数监控数据的漂移性、变化趋势、突出性或者异常性。

DUT test results should meet the following requirements:

-- For all DUT, FPSC needs to satisfy Class A.

When the functional parameters of components cannot be continuously monitored during the test, it is necessary to carry out intermediate measurement and do parameter test according to the test sequence when the test duration reaches 25%, 50% and 75%.

The data of the continuous parameter monitoring must be examined with respect to drifts, trends and irregularities.

10.3.2 试验 Test

试验依据标准 IEC 60068-2-14 或 GB/T 2423.22 执行，L03 试验参数应满足表 74 要求。

The test is carried out as per IEC 60068-2-14 or GB/T2423.22, with the following parameters as Table 74.

表 74 温度交变耐久 试验参数 Table 74 Test parameters for temperature cycle endurance test

工作模式 DUT operating mode	间歇性 2.a&2.c （见图 30）Intermitting 2.a& 2.c （as per figure 30）
温度变化曲线 Temperature profile	依据图 30 定义 As per figure 30
最低试验温度 Minimum test temperature	T_{min}
最高试验温度 Maximum test temperature	T_{max}
在 T_{min} 和 T_{max} 的保持时间 Holding time at T_{min} and T_{max}	30 min
循环数量 Test cycles	科芬-曼森模型（见附录 A.3），应在 CTS 中明确定义试验时间。Coffin-Manson model (as per appendix A.3), Test duration should be defined in CTS.

A.2 阿伦尼乌斯模型 A.2 Arrhenius model

A.2.1 为了计算零部件使用寿命试验—高温耐久性试验的持续时间，应考虑温度谱百分比。

A.2.1 The calculation of the test duration of the high-temperature endurance test life test is based on the temperature spectrum percentage.

$$A_{T,i} = e^{\left[-\left(\frac{E_A}{k} \right) \left(\frac{1}{T_{Test} + 273,15} - \frac{1}{T_{Field,i} + 273,15} \right) \right]}$$

其中 Where:

- $A_{T,i}$ 阿伦尼乌斯模型加速因子 Acceleration factor of the Arrhenius model
 E_A 活化能 $E_A = 0, 45 \text{ eV}$ Activation energy $E_A = 0, 45 \text{ eV}$
 K 波兹曼常数 Boltzmann constant ($k = 8.617 \times 10^{-5} \text{ eV/K}$)
 T_{test} 试验温度 (单位: $^{\circ}\text{C}$) , 通常为 T_{max} Test temperature ($^{\circ}\text{C}$) , generally T_{max}
 $T_{field,i}$ 应用场所温度 (单位: $^{\circ}\text{C}$) Field temperature ($^{\circ}\text{C}$) according to the temperature spectrum as per use profile

高温耐久性试验的总持续时间，通过加速系数根据以下方程得出。

The total test duration for the high-temperature endurance test results from the acceleration factor as per the following equation.

$$t_{test} = t_{oper.} \cdot \sum_i \frac{P_i}{A_{T,i}}$$

其中 Where:

- t_{test} 使用寿命试验 - 高温耐久性试验持续时间 (小时) Test duration (hours) of the high-temperature endurance test life test
 t_{oper} 在相应分区的工作时间 (小时) Operating time (hours) in the field
 P_i 工作时间段百分比 Percentage of the operating time
 $A_{T,i}$ 温度为 $T_{field,i}$ 时的加速因子 Acceleration factor for temperature $T_{field,i}$

A.2.2 用于带冷却回路的零部件,典型冷却系统温度谱见表 A-3。

A.2.2 For components with a connection to the coolant circuit, the temperature spectrum specified in the following table.

A.3 科芬-曼森模型 A.3 Coffin-Manson model

为了计算零部件使用寿命试验—温度交变耐久性试验的持续时间，应考虑零部件在应用场所的平均温度变化，以及在应用场所的使用寿命期间温度循环次数。

The calculation of the test duration for the "temperature cycle test" life test is based on the average temperature change of the component in the field and the number of temperature cycles during the service life in the field.

A.3.1 关于应用场所温度循环次数，可以将每天两次温度变化作为典型值。因而得出：

A.3.1 Two temperature cycles per day can typically be assumed for the number of temperature cycles in the field. This results in:

$$N_{\text{tempcyclefield}} = 2 * 365 * 15 \text{ (年 years)} = 10950 \text{ 个循环 cycles}$$

根据应用场所平均温度变化按照以下公式计算出科芬-曼森模型加速系数：

Depending on the average temperature change in the field, the acceleration factor of the Coffin-Manson model is calculated as follows:

其中 Where:

A_{cm} 科芬-曼森模型加速因子 Acceleration factor of the Coffin-Manson model

ΔT_{test} 一个试验循环期间的温度差 Temperature difference during a test cycle ($\Delta T_{\text{test}} = T_{\text{max}} - T_{\text{min}}$)

ΔT_{field} 在应用场所的使用寿命期间平均温度差 Average temperature difference during service life in the field

C 科芬-曼森模型参数 Parameter of the Coffin-Manson model ($C=2.5$)

试验循环总数量根据以下公式算出

The total number of test cycles is calculated as per

其中 Where:

N_{test} 需要的试验循环数量 Number of test cycles

$N_{\text{tempcyclefield}}$ 在应用场所的使用寿命期间温度循环数量 Number of temperature cycles during service life in the field

A_{CM} 科芬-曼森模型加速因子 Acceleration factor of the Coffin-Manson model

A.3.2 用于带冷却回路的零部件。

A.3.2 For components with a connection to the coolant circuit.

实验循环数量需按照三个温度范围计算：

The number of test cycles is calculated as below temperature:

$$1, \Delta T_{\text{test}, 1} = T_{CC, \text{max}} - T_{CC, \text{min}}$$

$$2, \Delta T_{\text{test}, 2} = T_{RT} - T_{CC, \text{min}}$$

$$3, \Delta T_{\text{test}, 3} = T_{CC, \text{max}} - T_{RT}$$

4,各温度范围循环数量根据以下公式算出：

4, The each number of test cycles is calculated as per

$$x_{environment} = \frac{N_{TempCyclesField} - \frac{N_{Prüf, Mode, i}}{2} \cdot (A_{CM, environment, 2} + A_{CM, environment, 3})}{A_{CM, environment, 1} - \frac{1}{2} \cdot (A_{CM, environment, 2} + A_{CM, environment, 3})}$$
